# Surgispon

**SURGISPON** ® is a sterile hemostatic absorbable gelatin sponge made of pure pharmaceutical gelatine (lyophilized hydrolyzed collagen) foam, which gives it a uniform porosity & reacts neutrally. The dried foam is cut, packaged and sterilised using gamma radiation. **SURGISPON** is immediately available for use in the operating theatre and does not require any sterilisation by dry heat or autoclaving.

## How to use Surgispon Dental

- Soak the cube in sterile saline solution or use dry
- If used dry, the sponge is slightly compressed. The sponges must be applied to a bleeding area under light pressure for one or two minutes until the bleeding stops
- If used wet, withdraw SURGISPON cubes and squeeze thoroughly between gloved fingers to expel air bubbles, replace in saline and keep there until needed
- When bleeding is controlled, the cubes can be left in situ

**SURGISPON** may be used in combination with antibiotics, Thrombin, chemotherapeutics without reduction of the sponges haemostatic effect. Carefully read applicable instructions for use before usages.
